Tramper Hire at Woolley Woods

We hope you enjoy exploring Woolley Woods using the Tramper.

Initially, there is one route available – the Woolley Meadows – but work is taking place for longer Tramper options to be added over the coming months.

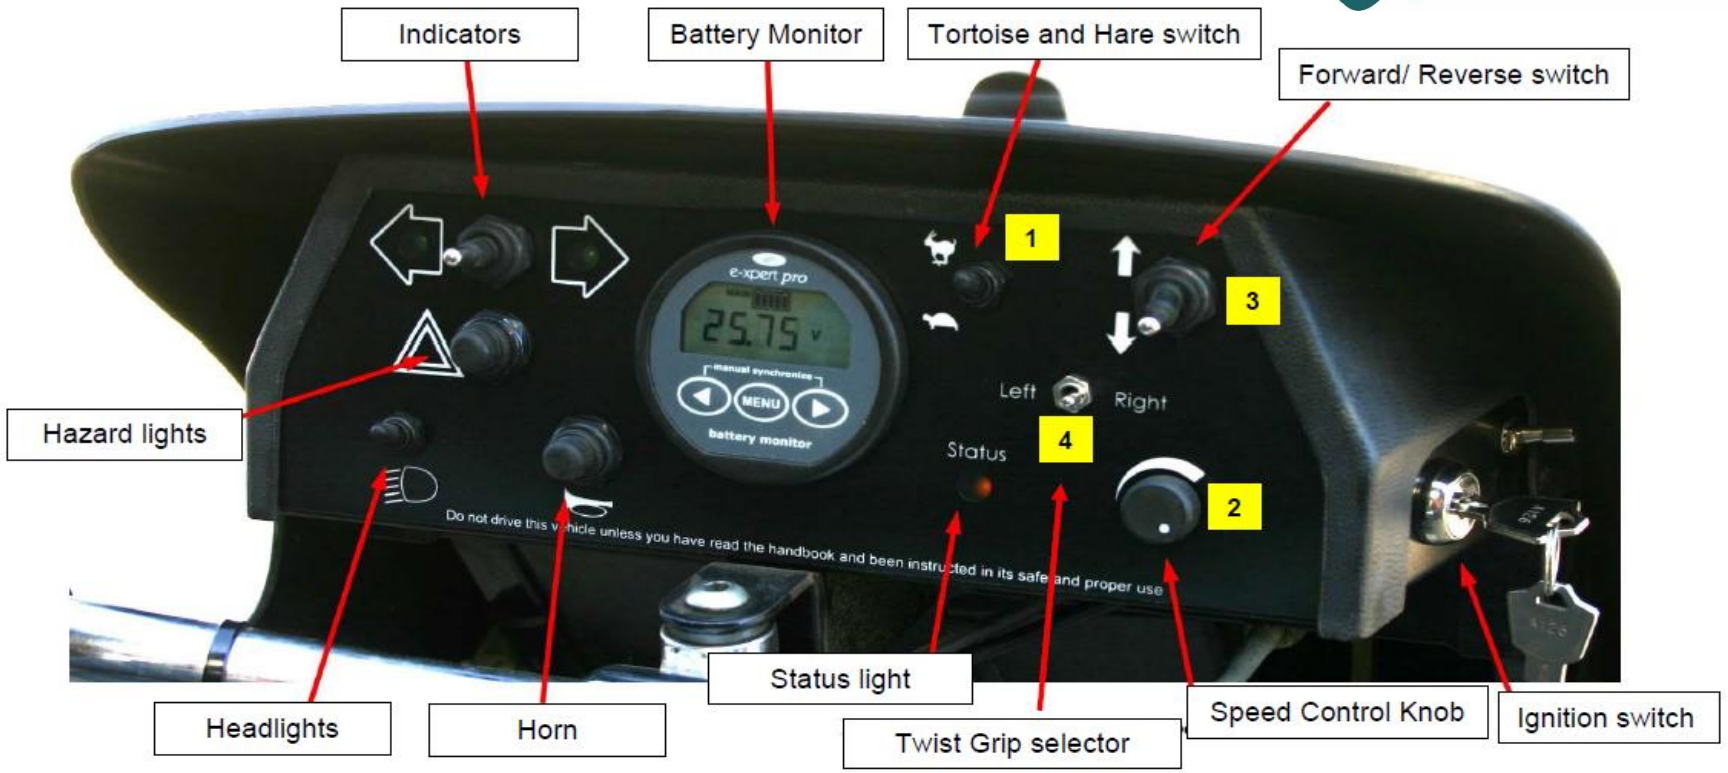

The Woolley Meadows route offers a well surfaced, wide track with gentle gradients and panoramic views - perfect if you are a first time user.

However, please take care of the drainage channels/ slopes immediately to the side of the path (see example in photo). If you have any problems during your hire please call

In partnership with Disability Together | Countryside Mobility

Tramper Controls

Set the Speed – Choose 'Tortoise' or Hare (or '4' on older Trampers) using switch **1**. Next, turn the Speed Control knob **2** (left = slow, right = fast). The combination of these sets the Tramper's speed. When starting, or coming to a challenging section, turn the switch down and speed knob round to the left. **Always better to set the speed slow and then turn up.**

Choose the Direction – Push switch **3** up to go forwards and down to reverse.

Switching On and Off - Turn key in the ignition switch. Turn off and remove key when leaving the Tramper. The Tramper goes into standby after 5 mins – just switch off and back on.

Making the Tramper Move – Use switch **4** to select left or right twist grip. Turn twist grip to move, release to stop.
